

4. (Currently Amended) A dispenser (1) according to claim 1 ~~any one of the preceding claims~~, wherein the actuation surface (9) is provided with a shallow recess (9a) for accommodating an average human thumb.
5. (Currently Amended) A dispenser (1) according to claim 1 ~~any one of the preceding claims~~, wherein the cross-section of the actuator (6) and of that part of the main body (2) in which the actuator (6) is mounted is oblong.
6. (Currently Amended) A dispenser (1) according to claim 1 ~~any one of the preceding claims~~, wherein the actuator (6) and the main body (2) are provided with co-operating guiding features (7,8) extending in the direction of actuation.
7. (Currently Amended) A dispenser (1) according to claim 1 ~~any one of the preceding claims~~, wherein the actuation force is less than 50 N.
8. (Currently Amended) A dispenser (1) according to claim 1 ~~any one of the preceding claims~~, wherein the center of gravity is located in the lower half of the dispenser (1).
9. (Currently Amended) A dispenser (1) for administration of a pharmaceutical fluid through manual actuation, at least comprising a main body (2), which includes two extending grips (4), and an actuator (6) mounted movable relative to the main body (2) and having an actuation surface (9) which is sufficiently wide to support an average human thumb, characterised in that the main body (2) and the actuator (6) have a symmetrical shape and said body supports an elongated symmetrical nozzle as illustrated in figures 1-4 of the drawings.
